ABSTRACT

ABSTRACT

This project is a web based Online Gas connection Booking for an existing theatre. The project objective is to book the ticket uploaded by the authorities online.

This project is an attempt to provide the advantages of booking tickets online to users in a particular theatre. It helps getting ticket details and information about movie through text message in their mobile anywhere through internet. Thus the users will get the benefit of online booking and they do not have to stand in a queue for the tickets. This system can be implemented to any gas agency in the locality.

The movie details are uploaded by the authorities of the theatre for.

INTRODUCTION

INTRODUCTION

This project is a web based Online Gas connection Booking for an existing theatre. The project objective is to book the ticket uploaded by the authorities online.

This project is an attempt to provide the advantages of booking tickets online to users in a particular theatre. It helps getting ticket details and information about movie through text message in their mobile anywhere through internet. Thus the users will get the benefit of online booking and they do not have to stand in a queue for the tickets. This system can be implemented to any gas agency in the locality.

The movie details are uploaded by the authorities of the theatre for.

1.1 PROJECT OBJECTIVE:

- To make gas connection booking process easy through online.
- User should not need to stand in a queue for booking their gas connection .
- Authorities can be able to easily upload the details of movies.
- User will get their ticket details through message.

1.2 PROJECT OVERVIEW:

The central concept of this web application is to allow the users to book the tickets of a movie which is running in the particular theatre.

The authorized staff can upload, delete and edit the movie details with the necessary documents. No others unauthorized staff can make any changes to the upload section of the website. Each authorized staff have to make login in to this application with their Username and Password to upload or change the movie details.

1.3 PROJECT SCOPE:

This system can be implemented for any particular gas agency so that they can upload movie details for the users.

It allows all users to have access website after login so that they can book tickets from anywhere and from any device. No one has to go to specific location to book the tickets. It make easy to upload movie details for theatre staff and to view the seats left for user from any location and from any device. Since the application is available in the online web it is easily accessible and always available.

SYSTEM ANALYSIS

SYSTEM ANALYSIS

System analysis is the process of gathering and interpreting facts, diagnosing problems and using the information to recommend improvements on the system. System analysis is a problem solving activity that requires intensive communication between the system users and system developers.

System analysis or study is an important phase of any system development process. The system is viewed as a whole, the inputs are identified and the system is subjected to close study to identify the problem areas. The solutions are given as a proposal. The proposal is reviewed on user request and suitable changes are made. This loop ends as soon as the user is satisfied with the proposal.

NON FUNCTIONAL REQUIREMENTS

1. N.1: Platform:

This software is web based application developed for all types of end users. It runs in any device as this web application is full responsive.

2. N.2: Database:

The application is using MySQL database.

3. N.3: Internet Access:

As this application is hosted on web server, therefore internet access is required

SYSTEM DESIGN

SYSTEM DESIGN

System design is the solution for the creation of a new system. This phase focuses on the detailed implementation of the feasible system. It emphasizes on translating design. Specifications to performance specification. System design has two phases of development

- Physical Design
- Logical Design

During logical design phase the analyst describes inputs (sources), output (destinations) and databases (data stores) all in a format that meets the user requirements. The analyst also specifies the needs of the user at a level that virtually determines the information flow in and out of the system and the data resources. Here the logical design is done by database design. The physical design is followed by physical design or coding. Physical design produces the working system by defining the design specifications, which specify exactly what the candidate system must do. The programmers write the necessary programs that accept input from the user, perform necessary processing on accepted data and produce the required report on a hard copy or display it on the screen.

3.1 INPUT AND OUTPUT DESIGN

➤ Input Design:

Input design is the link that ties the information system into the world of its
Users,

The input design involves determining the inputs, validating the data, minimizing the data entry and provides a multi-user facility. Inaccurate inputs are the most common cause of errors in data processing. Errors entered by the data entry operators can be controlled by input design. The

user-originated inputs are converted to a computer based format in the input design. Input data are collected and organized into groups of similar data. Once identified, the appropriate input media are selected for processing. All the input data are validated and if any data violates any conditions, the user is warned by a message. If the data satisfies all the conditions, it is transferred to the appropriate tables in the database. In this project the student details are to be entered at the time of registration. A page is designed for this purpose which is user friendly and easy to use. The design is done such that users get appropriate messages when exceptions occur.

➤ **Output Design:**

Computer output is the most important and direct source of information to the user. Output design is a very important phase since the output needs to be in an efficient manner. Efficient and intelligible output design improves the system relationship with the user and helps in decision making. Allowing the user to view the sample screen is important because the user is the ultimate judge of the quality of output. The output module of this system is the selected notifications.

DATABASE

DATABASE

Database Design

Databases are store house of data in software system. Data are store on table

Inside the database. Serval table are created for manipulation of data in system. Two

Essential setting for database they are :

- **Primary keys:**

The field that is unique for all the record occurrences.

- **Foreign keys**

The field used to set relation between tables.

Normalization is a technique to avoid redundancy in the tables.

SYSTEM TOOLS

SYSTEM TOOLS

The various system tools that have been used in developing both the front end and the back end of the project are being discussed in this chapter.

FRONTEND

- **Bootstrap**

Bootstrap is a [free and open-source](#) front-end [web framework](#) for designing [websites](#) and [web applications](#). It contains [HTML](#)- and [CSS](#)-based design templates for [typography](#), forms, buttons, navigation and other interface components, as well as optional [JavaScript](#) extensions. Unlike many web frameworks, it concerns itself with [front-end development](#) only.

Bootstrap is the second most-starred project.

BACK END

The back end is implemented using MySQL which is used to design the databases.

PHP as a backend server.

DATA DICTIONARY

DATA DICTIONARY

Server: localhost:3306 » Database: gas_book_db » Table: admin

The screenshot shows the 'Structure' tab for the 'admin' table. The table has two columns: 'aid' (int(10)) and 'pwd' (varchar(16)). The 'aid' column is defined with 'No' as Null, 'None' as Default, and 'AUTO_INCREMENT' as Extra. The 'pwd' column is also defined with 'No' as Null, 'None' as Default, and 'None' as Extra.

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
1	aid	int(10)			No	None		AUTO_INCREMENT	Change Drop More
2	pwd	varchar(16)	latin1_swedish_ci		No	None			Change Drop More

Server: localhost:3306 » Database: gas_book_db » Table: consumer_detail

The screenshot shows the 'Structure' tab for the 'consumer_detail' table. The table has eleven columns: 'cid' (int(10)), 'did' (int(5)), 'pwd' (varchar(16)), 'name' (varchar(30)), 'address' (varchar(100)), 'city' (varchar(10)), 'pin' (int(6)), 'm_no' (bigint(10)), 'e_id' (varchar(30)), 'reg_date' (date), and 'status' (varchar(15)). The 'cid' column is defined with 'No' as Null, 'None' as Default, and 'AUTO_INCREMENT' as Extra. The 'did' column is defined with 'No' as Null, 'None' as Default. The 'pwd' column is defined with 'Yes' as Null, 'NULL' as Default. The 'name', 'address', 'city', 'pin', 'm_no', 'e_id', 'reg_date', and 'status' columns are all defined with 'No' as Null, 'None' as Default. The 'consumer_detail' table also includes a 'pin' column which is defined with 'No' as Null, 'None' as Default.

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
1	cid	int(10)			No	None		AUTO_INCREMENT	Change Drop More
2	did	int(5)			No	None			Change Drop More
3	pwd	varchar(16)	latin1_swedish_ci		Yes	NULL			Change Drop More
4	name	varchar(30)	latin1_swedish_ci		No	None			Change Drop More
5	address	varchar(100)	latin1_swedish_ci		No	None			Change Drop More
6	city	varchar(10)	latin1_swedish_ci		No	None			Change Drop More
7	pin	int(6)			No	None			Change Drop More
8	m_no	bigint(10)			No	None			Change Drop More
9	e_id	varchar(30)	latin1_swedish_ci		No	None			Change Drop More
10	reg_date	date			Yes	NULL			Change Drop More
11	status	varchar(15)	latin1_swedish_ci		No	Not Registered			Change Drop More

Server: localhost:3306 » Database: gas_book_db » Table: distributor_detail

The screenshot shows the 'Structure' tab for the 'distributor_detail' table. The table has ten columns: 'did' (int(5)), 'pwd' (varchar(16)), 'name' (varchar(20)), 'address' (varchar(100)), 'city' (varchar(10)), 'pin' (int(6)), 'm_no' (bigint(10)), 'e_id' (varchar(30)), 'status' (varchar(10)), and 'proof' (text). The 'did' column is defined with 'No' as Null, 'None' as Default, and 'AUTO_INCREMENT' as Extra. The 'pwd' column is defined with 'No' as Null, 'None' as Default. The 'name', 'address', 'city', 'pin', 'm_no', 'e_id', 'reg_date', and 'status' columns are all defined with 'No' as Null, 'None' as Default. The 'distributor_detail' table also includes a 'proof' column which is defined with 'No' as Null, 'None' as Default.

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
1	did	int(5)			No	None		AUTO_INCREMENT	Change Drop More
2	pwd	varchar(16)	latin1_swedish_ci		No	None			Change Drop More
3	name	varchar(20)	latin1_swedish_ci		No	None			Change Drop More
4	address	varchar(100)	latin1_swedish_ci		No	None			Change Drop More
5	city	varchar(10)	latin1_swedish_ci		No	None			Change Drop More
6	pin	int(6)			No	None			Change Drop More
7	m_no	bigint(10)			No	None			Change Drop More
8	e_id	varchar(30)	latin1_swedish_ci		No	None			Change Drop More
9	status	varchar(10)	latin1_swedish_ci		No	Deactive			Change Drop More
10	proof	text	latin1_swedish_ci		No	None			Change Drop More

Server: localhost:3306 » Database: gas_book_db » Table: feedback_complain

The screenshot shows the 'Structure' tab for the 'feedback_complain' table. The table has seven columns: 'cid' (int(10)), 'did' (int(5)), 'date' (date), 'time' (time), 'type' (varchar(10)), 'subject' (varchar(30)), and 'description' (varchar(300)). The 'cid' column is defined with 'No' as Null, 'None' as Default, and 'AUTO_INCREMENT' as Extra. The 'did' column is defined with 'No' as Null, 'None' as Default. The 'date' and 'time' columns are defined with 'No' as Null, 'None' as Default. The 'type', 'subject', and 'description' columns are all defined with 'No' as Null, 'None' as Default.

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
1	cid	int(10)			No	None			Change Drop More
2	did	int(5)			No	None			Change Drop More
3	date	date			No	None			Change Drop More
4	time	time			No	None			Change Drop More
5	type	varchar(10)	latin1_swedish_ci		No	None			Change Drop More
6	subject	varchar(30)	latin1_swedish_ci		No	None			Change Drop More
7	description	varchar(300)	latin1_swedish_ci		No	None			Change Drop More

Server: localhost:3306 > Database: gas_book_db > Table: order_detail

The screenshot shows the MySQL Workbench interface with the following details:

- Toolbar:** Browse, Structure, SQL, Search, Insert, Export, Import, Operations, Triggers.
- Current View:** Table structure (selected).
- Table Structure View:**

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
1	oid	int(10)		No	None			AUTO_INCREMENT	Change Drop More
2	cid	int(10)		No	None			Change Drop More	
3	did	int(5)		No	None			Change Drop More	
4	date	date		No	None			Change Drop More	
5	time	time		No	None			Change Drop More	
6	amt	float		No	475			Change Drop More	
7	status	varchar(20)	latin1_swedish_ci	No	Pending			Change Drop More

CONCLUSION

CONCLUSION

The project entitled **Online Gas connection Booking** was completed successfully.

The system has been developed with much care and free of errors and at the same time it is efficient and less time consuming. The purpose of this project was to develop a web application for booking movie tickets from a theatre.

This project helped us in gaining valuable information and practical knowledge on several topics like designing web pages using html & css, usage of responsive templates, , and management of database using mysql . The entire system is secured. Also the project helped us understanding about the development phases of a project and software development life cycle. We learned how to test different features of a project.

This project has given us great satisfaction in having designed an application which can be implemented to any nearby theatres running various kinds of movies by simple modifications.
